

Sunday, 2nd October 2016

Good Morning Dear Friends !

I am Sunil Kurambhatti. I am Chairman & Founder Director of WINDRIS INDIA PRIVATE LIMITED. I am an Electrical Engineer passed out in 1981. In my 35 Years of service I worked for –

- 1) Kirloskar Engineering & Projects Private Limited
- 2) Space Age Engineering Projects Private Limited
- 3) Kirloskar Pneumatic Co. Ltd.
- 4) Bharat Forge Limited
- 5) Automag India Private Limited

All these years I was in the Engineering and Designing Department.

Some of my major Projects were –

- 1) Commissioning of First 6400 Amp Circuit Breaker Manufactured in India at Warana Sahakari Sugar Factory
- 2) Rajasthan State Mines & Minerals , Udaipur 33 KV incomer Control Panel
- 3) 24 Nos. of Stacker Reclaimer in various Cement Plant & Coal Handling Plants
- 4) 400 t Mechanical Press for Bajaj Auto
- 5) ERW Pipe line at RSP
- 6) Automation in almost all Automobile Industries in India & Abroad – To name a few – Maruti Udyog, Honda Car, Honda Motor Cycle & Scooter, Mahindra & Mahindra – Scorpio Plant, TKML

During these years, I gathered valuable experience. However I soon felt that my growth was being limited. I worked to translate my ideas into practice and stand on my feet, doing something I really believed in.

I was looking for a product which was well-known, technically sound and proven and also Unique.

During my working days, I had come across a product "Cable Reeling Drum" which I had commissioned in my service tenure.

I then decided to form my own company. I had to first decide on Name and Logo, which will be suitable for my products. Then came all the formalities and paper work. Which were quite considerable – e.g. get Approval of Name from Ministry of Company Affaires, Shop Act, VAT registration, Sales Tax, Profession Tax, Bank Account etc.

After formation of the company WINDRIS INDIA PRIVATE LIMITED I approached STEMMANN TECHNIK, GmbH to be involved as working partners in India. My technical experiences and the presentation of my newly created company must have impressed them and they decided to work with WINDRIS INDIA.

This was only the beginning With our hard work, we gained the confidence of many customers. Furthermore as an acknowledgement of our systematic working we have added another feather in our cap with an ISO 9001 certificate.

WINDRIS INDIA is now working in the field of Energy and Data Transfer to any moving equipment such as Cranes, Wind Mills, and Container Loader & Un-loader at Ports, Pantographs for Railways, and Third Gear Shoe & Earth Ground Contact for Metro.

This was however not without its own difficulties. But we never compromised on our own professional and personal ethics and value system. We concentrated on our own progress without losing our focus.

My message to you all would be that there are not always enough job opportunities for all the engineers, who pass out every year. But should not get discouraged and find

out newer opportunities and newer avenues, which will offer them numerous chances. There are many unsolved problems try to pick them up, work on them and be a solution provider which further leads to become Entrepreneur.

To become a good entrepreneur one should have –

- 1) Integrity towards self and nation
- 2) No compromise on business ethics
- 3) Honesty and transparency in all business deals to expand the business.

One however can not be lazy and rest on one's success. One has to look for new opportunities, new products and new awareness and to be creative & Innovative.

The road to success is never easy. One has to put in efforts, hard work accompanied by diligence and sincerity.

I wish all of you a very bright and prosperous future professionally and otherwise.

Last but not the least never ever forget to be proud of –

Our Nation
Parents and
Teachers

These are the major contributors to making you what you are and will be.

Life is beautiful.....!
Enjoy it.....!!

If anyone has any questions you are welcome to discuss them with me anytime anywhere.

Thank you for this opportunity given to me to share my views with you all who are going to be FUTURE INDIA.
